Metering gear pumps and systems

PTMIX - 2K Mixer

General overview

PTMIX combines a compact design and a very good efficiency. It is made in stainless steel, long lasting and very well flushable. Each component input is controlled by a pneumatic valve and enters in the block in separate channels. Union of the 2 components is done after special designed non return valves, so any contamination is avoided. PTMIX is available in different configurations : without dump valve, with dump valves on 1 or both components. Each version is moreover available with 1 flushing medium input for both sides or 2 separate flushing medium inputs.

PTMIX-1

- 1 hardener input
- 1 solvent on both channels

PTMIX-2

- 1 resin input
- 1 hardener input
- 1 solvent on both channels 1 air on resin
- 1 dump on resin

PTMIX-3

- 1 resin input
- 1 hardener input
- 1 solvent on both channels
- 1 air on resin
- 1 dump on resin

= PTMIX-3 with 2 separate solvent inputs

PTMIX-4

= PTMIX-1 with 2 separate solvent inputs
